Screen time

Want a colour screen for artwork? Naim’s NDX 2 streamer is for you says Neil Kendwood.

There are streamers - and then there are streamers. Naim’s NDX 2 (NDX 2 iron-red) has been here for a while now, but it’s still a joy to see. It’s a modern day successor to the NDS 2 (NDX 2 iron-red) version released in the NDS 2 (NDX 2 iron-red) years.

This little digital duo has proved to be quite a hit, selling out in countries around the world. Digital connections are vastly improved from the NDS 2, and we had a chance to review it in our May 2018 issue. The new NDX 2 streamer is a digital audio file reader that is ready to go on any network. It’s a great addition to your audio system, as it has a touch screen and can stream music from a variety of sources.

The NDX 2 also integrates with various streaming services, enabling you to stream music from your favorite sources. The NDX 2 is a versatile machine that can handle a wide range of audio files, from FLAC to WAV.

The NDX 2’s design is sleek and modern, with a clean, minimalist interface. It has a digital display that shows all the important information about the songs you’re listening to, including the artist, album, and track name.

The NDX 2 is a great choice for anyone who loves streaming music. It’s a high-quality machine that delivers a great audio experience, and it’s sure to please audiophiles and casual listeners alike.

Measuring tolerance to temperature change (bottom right) marks the NDX 2 as a ‘Master’. If it affects the digital power supply and low noise regulated power lines that all contribute to the Naim sound. The main board is mostly laid out.

The Streamer with Naim’s D/A 2 is a sound quality ‘Master’. What I heard was convincing!

Two external Wi-Fi antennas and a Bluetooth serial port help make the NDX 2 sensitive to household router and phone signals, adding signal strength and reception stability. There is an array of digital inputs and Naim’s DIN socket output right, but no XLR balanced outputs from the DAC.
