

Want more from music streaming?

there's a
naim for
that

The Naim Difference

Music formats and technologies change, but one thing stays the same: our founding mission that Naim will take you closer to the authentic sound and emotion of the music you love.

Our unique music streaming platform is designed to deliver a pure Hi-Fi performance, with the legendary Naim sound, whether you're listening to your own digital library, commercial music services such as TIDAL and Spotify, and even internet radio. It's also Roon Ready.

We also believe great sound should be easy to enjoy. Our Naim app makes it simple to browse and play your music, and to bring multiple Naim streaming products together into a seamless multiroom system.

From the compact Uniti Atom system to the flagship ND 555 network player, each of our quality music streaming solutions is engineered and built by experts at our factory in Salisbury, England – where we've been crafting award-winning Hi-Fi for more than 45 years. Read on to find out more about what makes the Naim music streaming family so special.

Naim founder, Julian Vereker in his workshop

More Music Services Supported

Naim's unique streaming module includes native support for Apple AirPlay, Spotify, TIDAL, Internet Radio, Bluetooth wireless connectivity, and UPnP™ streaming (for easy access to your own digital music collection.). Built-in Google Chrome Cast also gives you access to Qobuz, Deezer, SoundCloud and much more. The Naim module's sophistication allows for further streaming services to be added, too.

Performance-Boosting Technology

Among many innovations, the Naim music streaming module contains enough memory to buffer up to 5 minutes of CD quality audio, meaning audio dropouts are prevented. The use of Low Voltage Differential Signalling (LVDS) reduces susceptibility to external noise, while a new clocking architecture ensures greater accuracy.

Easily Upgradeable

Naim have been a pioneer in the modular approach to system building since the early 1970's, offering a clearly defined upgrade path to the next level of audio performance, without having to purchase a completely new system. Free software upgrades add new services and functionality.

Unique Music Streaming Platform

There is nothing 'off-the-shelf' about the hand-built music streaming products in this guide. At the heart of each is a custom-designed streaming module, engineered by Naim experts to set new standards in performance, functionality and ease of use.

Three Years and 25 Engineers

Developing a new streaming platform was one of the biggest projects Naim has undertaken in its 45 year history. Naim engineers across all disciplines – electronic, industrial, acoustic, mechanical, and software – worked for three years to create a system that could make the most of online services such as TIDAL and Spotify while adding future-proof flexibility.

Naim App

The custom Naim app gives you effortless control over individual or multiple Naim products.

Download on the **App Store**

Available from **Google Play**

A World of Music at Your Fingertips

The Naim app, available on iOS and Android devices, provides simple yet comprehensive control over both your music and the network-connected Naim Audio products used to play it. It will help you find and set-up connected Naim products, then get the most from them. You can adjust volume, skip, pause and play tracks, scroll through album art, create playlists and store favourite radio stations to be easily accessed later.

Features

UPnP™ Streaming

Use UPnP™ (Universal Plug n Play) to read music from storage devices, PCs or Macs on the same network as your Uniti or network player, then you can take control with the Naim app and enjoy playback at up to 32bit/384KHz resolution.

Spotify Connect

Discover millions of songs from the world's most popular streaming service with the built-in Spotify Connect feature. Your Uniti or network player will communicate directly with Spotify's servers freeing up your smart device to use other apps or make calls and saving its battery life.

TIDAL

The lossless streaming service has been seamlessly integrated into the Naim Audio App for iOS and Android to allow you to immerse yourself in high-quality sound via your Naim Audio system. Each Naim Uniti and network player comes with a 90-day free trial of TIDAL, too!

AirPlay

Directly stream music from your iOS device or from iTunes and Apple Music. Support for AirPlay 2 – coming to Naim Uniti and network players in Spring 2019 – adds the ability to play music across multiple speakers and use Apple's Siri voice assistant to control where it's playing.

Chromecast built-in

Built-in Google Chromecast allows you to stream from hundreds of supported smartphone or tablet apps, including additional music-streaming services such as Qobuz and Deezer.

vTuner

Enjoy a world of internet radio stations and much more. With vTuner you can enjoy live radio stations and on-demand podcasts via a highly monitored and reliable database organised by genre, quality and location.

Bluetooth

Simple point-to-point wireless streaming from your portable devices, with support for the superior-quality aptX HD standard, allowing superior-quality streaming from suitably equipped smartphones and portable music players.

Roon

All the Naim products in this guide are Roon-ready, enabling you to make the most of this excellent digital music interface. Roon looks at your music and finds photos, bios, reviews, lyrics, and concert dates, and makes connections between artists, composers, performers, conductors, and producers.

“A masterclass in style and substance. This is hi-fi for the 21st Century.”

“The combination of myriad source options and great sound make the [Uniti] Star an obvious choice.”

Uniti Atom

Uniti Atom is a beautiful, compact multi-source music player that will seduce you with its amazing sound quality and outstanding feature set. Its 40-watt integrated amplifier and high-resolution music streaming capabilities will fill your home with stunning high-fidelity sound from almost any source. Just add speakers.

Perfect for smaller rooms - though it also has the power to fill larger ones - Uniti Atom packs a lot into its sleek dimensions, including easy connectivity for TV and headphones (see ‘unique features’) as well as other digital and analogue sources. Like all in the new Naim music-streaming family, Uniti Atom is Roon-ready and multi-room capable, too.

Simply connect the Uniti Atom to your Wi-Fi network (a painless procedure via the Naim app or via the remote in the on-screen setup wizard) and wirelessly stream a world of music, from internet radio to a wide choice of streaming services, from Apple Music to Spotify; TIDAL to Qobuz and more. Have your own digital music collection on a networked drive or computer? Enjoy it on your Uniti Atom, which has Universal Plug n Play (UPnP™) support, and easily control it via that same Naim app. The performance quality is peerless.

Uniti Atom’s full-colour, 5” display screen is more than just a pretty face. It is driven by Naim’s custom streaming module via a faster, less noisy differential interface – specified, like all Naim components, to optimise sound quality.

Naim also developed a proximity detector, which is used to display more detailed user information when any Uniti system is approached. That detector, which sits neatly behind the front panel, is also used as a pairing mechanism for the remote control. A unique design, the Uniti remote was developed using wireless technology to give bi-directional control. It contains a movement sensor to wake up the remote when picked up, driven by custom software with parameters to adjust sensitivity.

Uniti Atom’s display, glass and control assembly is housed in a custom designed moulding, which has zero draft and high gloss surfaces to compliment the industrial design of the anodised aluminium casework.

Unique Features:

Uniti Atom doesn’t just deliver award-winning sound with music – it can transform your TV experience, too. That’s thanks to its HDMI ARC (Audio Return Channel) connection, previously an optional extra; a standard feature since January 2019. Connect to your TV via an HDMI cable to enjoy a huge audio improvement compared to your television speakers, enhancing everything from your favourite shows to movies, games and more.

Boosting its space-saving credentials further still, the Uniti Atom can also act as a great source for solo listening – thanks to its integrated headphone amplifier, a high-quality component with improved bass extension.

Acclaim for Uniti Atom:

The Award logos on this page represent just the latest highlights in a steady stream of acclaim for the Uniti Atom.

“You can’t fault the quality of the sound, nor the execution,” said Expert Reviews, while the verdict from Trusted Reviews was: “Such sound quality, such flexibility in sources and such beauty in design... this is the future of hi-fi”.

The last words go to What Hi-Fi, from its five-star review: “if you end up hearing one and fail to be excited at the prospect of ownership then, quite frankly, there’s little hope left for you.”

Upgrade Option: Uniti Core

Our matching music server (see p8) is the perfect partner. Hi-Fi World called the pair: “a potent combination. Take a listen and you will be seduced.”

Uniti Star

With plenty of power, features and the ability to play, rip, store and serve your treasured music collection, Uniti Star offers infinite possibilities. Stream your music in high-resolution, play or rip your CDs, access a world of music with a host of streaming services and dramatically improve the audio quality of your TV, games and more. Ready to go with practically any speaker set-up, Uniti Star will have you rediscovering your entire music collection with a deep, immersive sound.

The versatile Uniti Star takes all the core functionality of the Uniti Atom - including that HDMI ARC connectivity – and adds more of everything, not just a CD drive. That starts with a power increase to 70 Watts per channel, using A/B class amplification technology derived from Naim’s iconic NAIT integrated amps. It also includes the largest possible power supply, plus the finest-quality circuitry, to deliver the unique Naim pace, rhythm and timing.

Uniti Star features an incredibly powerful, phenomenally accurate fourth-generation 40-bit SHARC DSP processor. Unique Naim software minimises jitter (timing errors inherent in digital music streaming) and up-samples incoming data to ensure optimum sound quality. This all happens in the tiniest fraction of a second, so the only thing you notice is the extra clarity in your music.

Like its siblings, the Uniti Star includes superior Wi-Fi technology: support for 2.4 and 5 GHz, alongside a much better internal buffer and memory, minimises connectivity issues and maximises your musical enjoyment. The Wi-Fi aerials (one on either side of the product for optimum range) are integrated behind a slot machined into the heat sink, a patented system that provides robust connectivity without the need for an external aerial.

Unique Features:

Uniti Star’s custom-integrated CD drive offers exceptional playback, but also doubles as a ripper. Create bit-perfect copies of your CDs, save the data on an SD card or external storage (e.g. USB drive) and then play back or serve the music. Uniti Star uses a unique ripping engine to ensure that

the ripped data represents a faultless replica of the CD, even with damaged discs. You can choose to rip in either WAV or FLAC lossless format.

Combining a CD player alongside streaming and amplification technology – and that large power supply – takes expert engineering to get right. There’s plenty of that at Naim’s Salisbury HQ, though: Uniti Star’s design pays special attention to preserving thermal stability and decreasing interference between components.

Acclaim for Uniti Star:

“It is practically impossible to find fault with Naim’s new Uniti Star”, said Hi-Fi Choice, while the verdict from Forbes was “I hesitate to use the word perfect about any product but the Naim Uniti Star sounds pretty perfect to me” Giving it a Best Buy, BBC Music described the system’s sound as “precise, detailed and dynamic; beautifully balanced”.

Upgrade Option: Power Line

This cable is a precision-engineered design, with superior build quality. It provides a smooth, stable, low-noise power supply, enabling optimal performance.

“As complete and convincing an argument for one-box convenience as you’ll hear”

WHAT HI-FI?
★★★★★

“Designed to sit at the heart of a multiroom streaming audio system, the new Naim ripper/store/streamer also makes perfect sense as a stand-alone source.”

GRAMOPHONE
THE WORLD'S BEST CLASSICAL MUSIC REVIEWS

Uniti Nova

The reference player in the range, Uniti Nova has been configured with outstanding new technology to offer the very best hi-fi solution that can be implemented in a single-box. All the available space has been maximised: its circuitry features the highest-quality discrete components; a massive toroidal transformer powers an exceptional sound; superior isolation for optimum performance; superb connectivity, and 80 watts per channel of Class A/B amplification capable of driving the most demanding loudspeakers. In short, Uniti Nova is as good as an all-in-one player can get, delivering incomparable detail and depth you'll hear in every note, riff and chorus.

Let's delve deeper under the Uniti Nova's strong metal skin. That 80 watts of amplification can trace its DNA back to Naim's classic NAIT integrated amp. The filter sections in Uniti Nova are made using the finest-quality through-hole film capacitors and discrete transistors. The power amplifier sections are now twice as fast and run from linear power supplies with substantial transformers, and you also benefit from premium Burr Brown DACs to deliver the unique Naim pace, rhythm and timing.

Uniti Nova features an incredibly powerful, phenomenally accurate fourth-generation 40-bit SHARC DSP processor. This DSP chip removes jitter (timing errors) and, using Naim's RAM buffer (first used in the Naim DAC and NDS), oversamples the audio 16 times to feed those Burr Brown DACs, resulting in a smoother and more precise sonic performance.

You can't get to the top of the Uniti range without understanding the precision volume control this player features. This is so much more than a delightful dial: it is an audiophile discrete volume control that adjusts level in the analogue domain to a premium digital resolution. The technical design is based on Naim's bestselling NAC-N 272 streaming preamplifier, while its tactile, ultra-smooth rotation is inspired by its reference amplification system, Statement. It has a hidden power, too – Naim's space-saving geniuses have integrated the Bluetooth antenna here for a seamless aesthetic.

Unique Features:

Uniti Nova allows you to plug in an external USB-connected drive or SD card so you can store up to 20,000 tracks and play them back through your all-in-one player. You can also use your Uniti Nova to serve music to up to four network-connected players in a multiroom system.

This extra functionality joins a superb range of connectivity options for the Uniti Nova, including TV-boosting HDMI ARC (see p5), a great headphone amplifier and a suite of digital and analogue inputs.

If you want to hear even more of the Uniti Nova's exceptional capabilities, you can double up your box count and add a Naim power amplifier – see below.

Acclaim for Uniti Nova:

Stereophile said of the Uniti Nova: “When you add up its many features and functions and compare it with other offerings, the Uniti Nova is practically a bargain. Definitely, effusively, highly recommended.”

Hi-Fi+ called the Uniti Nova “a true revolution in performance from Naim [and comes] with the highest recommendation possible. If this is the future, it looks and sounds great!”

stereophile **hi-fi+**

Upgrade Option: NAP 200 Power Amplifier

Take your music to the next level by adding this excellent power amp, which drives larger speakers and higher volumes with ease.

Uniti Core

Uniti Core is a seriously powerful machine that will allow you to rip your entire CD collection, store up to 100,000 tracks, serve high-resolution (up to 32bit/384 KHz) files to Mu-so wireless speakers, Uniti all-in-one players or Naim Streamers and create a back-up for all of your music. As a Universal Plug n Play (UPnP™) server, the Uniti Core can provide high-quality music to up to 12 networked players.

You can also use Uniti Core as a standalone digital source – simply connect it to a digital-to-analogue converter or an amplifier with digital inputs and control playback via the Naim app. To give you extra flexibility, Uniti Core has a removable storage bay, so you can install your choice of HDD (Hard Disk Drive) or SSD (Solid State Drive); a simple process you or your specialist Naim dealer can perform. It supports drives up to 8TB. If you already have a NAS (Network Accessed Storage) drive, the Uniti Core can rip to this, too.

Uniti Core will scan the network for shared audio files and combine all music into one collection. User interface is via an iOS or Android App on tablet or phone which has been developed for this product and allows the user to edit metadata for individual CDs and choose alternative look-up sources.

The R&D for this product involved building a software platform for ripping and serving from the ground up, which also allowed compatibility with legacy servers, so music could be imported and built upon. It was a considerable project to combine all the relevant technologies (ripping, database management, network scanning/sharing, music stores, formatting, back-up of data and music browsing) in a user-intuitive way. A team of software engineers worked on this project with electronic and mechanical engineering to solve the challenge of integrating all these technical features in an elegant and efficient package.

Unique Features:

The compact, yet powerful Uniti Core is the perfect hub for your digital music collection. Every element of this dedicated music server – from the customised operating

system, the enhanced ripping engine and the linear power supply to the low-vibration aluminium casework – has been engineered to deliver consistent, reliable performance and highest sound quality. Advanced Ethernet technology means that Uniti Core simply will not buckle under stress, enabling UPnP™ players on the network or a connected DAC to perform at their best.

Uniti Core uses a unique ripping engine to ensure that the extracted data represents a flawless, bit-perfect copy of the CD. Simply insert your CD and wait a minute or two. Uniti Core will then automatically catalogue your ripped music using Rovi's vast online database, allowing you to search by title, artist, genre, track or composer via the Naim app. You'll never lose a CD again. The server supports a broad range of music formats including WAV, FLAC, DSD, Apple Lossless, AIFF, AAC, Windows Media-formatted files, Ogg Vorbis and MP3.

Finally, Uniti Core has a network available Downloads Folder to keep all your downloaded music, which will be combined in a seamless way when you view your music collection via the App.

Acclaim for Uniti Core:

Uniti Core's ripping and serving functionality has been widely praised by reviewers including Gramophone, HI-FI+ and Hi-Fi Critic. Praising it as a source component, too, the Ear said: the Uniti Core serves up that unique Naim sound signature.”

ear **HI-FI WORLD**

Upgrade Option: Any Naim Uniti or network player

To serve up your digital music collection in the best possible quality, pair with a Uniti system or dedicated Naim network player.

“The entry-level model in Naim’s new network music player range may look simple to the point of anonymity, but its performance could make it the true star of the lineup”

“...The superior sound quality delivered by those HD tracks was unmistakeable with the NDX 2”

HIFICRITIC

ND5 XS 2

ND5 XS 2 uses Naim’s innovative new streaming platform with an expanded feature set. High-res UPnP™ streaming, AirPlay, Chromecast built-in, Bluetooth (aptX HD), Spotify Connect, TIDAL, Roon compatibility, internet radio and multiroom streaming – alongside digital and USB inputs for conventional connections – make this versatile player the ideal partner for one of our integrated amplifiers.

Carefully selected and matched parts, an oversized toroidal transformer, decoupled PCB boards: the ND5 XS 2 benefits from classic Naim engineering and fastidious attention to detail to ensure that it delivers natural, engaging sound quality from all sources.

The streaming section of the ND5 XS 2 uses the latest Naim network card featuring low-noise, high-speed low-voltage differential signalling (LVDS) to route the digital audio signal. The higher speed is capable of decoding all HD audio formats at up to 32 bits/384 kHz or DSD128. Rather than the source acting as the digital timing master, our new streaming board turns things around and allows our DAC clock to control the flow of audio data. The data is integer-over-sampled in a SHARC DSP to an incredible 40-bit accuracy before it’s fed to the PCM1791A Burr-Brown digital-to analogue converter.

The ND5 XS 2 offers superb connectivity, giving it real flexibility in a classic Hi-Fi separates system. It outputs to a choice of stereo RCAs and DIN connections for analogue as well as a BNC coaxial digital output. There are also four digital inputs – one RCA, one BNC and two optical.

Unique Features:

The ND5 XS 2 keeps things simple by having no display – but thanks to the intuitive Naim app you still have effortless control over its features, as well as seamless interaction with other Naim products, including Mu-so, Uniti and other dedicated network players. You can access all of your music, including your favourite radio stations, streaming services and playlists, or explore artist discographies and biographies. Furthermore, you can now update your system

wirelessly with a single tap. The app also works with Uniti Core and all the music-serving capabilities that delivers to the ND5 XS 2 and other connected players.

Acclaim for ND5 XS 2

Superlative reviews are piling up for the ND5 XS 2, the first of Naim’s new network players to be released. In the Hi-Fi Choice Recommended review, the verdict was:

“A well-engineered network music player with sparkling performance and useful features”. Classical music authority, Gramophone, opined: “the entry-level Naim streamer.. punches well above its weight, and is superbly musical.”

Upgrade Option: Power Line

This cable is a precision-engineered design, with superior build quality. It provides a smooth, stable, low-noise power supply, enabling optimal performance.

NDX 2

With its world-class performance, the versatile and upgradable NDX 2 embodies the current state of the art for a single-box network player. A host of features such as high-res UPnP™ streaming, AirPlay, Chromecast built-in, Bluetooth (aptX HD), Spotify Connect, TIDAL, Roon compatibility, vTuner internet radio and multiroom streaming as well as digital and USB inputs provide all the connectivity you could wish for.

Naim’s main focus in developing the NDX 2 network player, however, was its performance, which takes a clear step up from its NDX predecessor. During the development of the NDX 2, Naim engineers examined every detail, from mechanical construction, component selection and board layout.

Alongside the bespoke Naim streaming platform, there is an upgraded DAC and discrete analogue stages. These and numerous other improvements over the acclaimed NDX make the NDX 2 a sonic force to be reckoned with, offering a sound that’s rich, detailed and engaging.

The Burr-Brown PCM1792A digital-to-analogue converter working alongside Naim’s new streaming platform is one of the best available. Naim improved its performance even further by implementing its own digital filters and adding a discrete current-to voltage converter immediately after the DAC.

The streaming section of the NDX 2 uses the latest Naim network card featuring low noise, high-speed low-voltage differential signalling (LVDS) to route the digital audio signal. The higher speed is capable of decoding all HD audio formats at up to 32 bits/384 kHz or DSD128. Rather than the source acting as the digital timing master, our new streaming board turns things around and allows our DAC clock to control the flow of audio data. The data is integer-over-sampled in a SHARC DSP to an incredible 40-bit accuracy before it’s fed to the Burr-Brown DAC.

The NDX 2 features an integrated low-noise power supply with a custom-designed toroidal transformer and separate windings for the digital and analogue sections.

Unique Features:

Upgradeability is key to any Naim product, and the NDX 2 is no exception. The obvious first upgrade would be adding an XPS DR power supply, but there’s more: adding the 555 PS Classic Finish power supply offer a massive stepping stone up to Naim 500 Series performance, leaving a smaller step up to Naim’s ultimate source, the ND 555. If you then want to upgrade to the ND 555, your 555 PS Classic Finish is ready to pair it – and can be given a facelift to 500 Series Finish livery for the perfect visual and sonic match. An upgrade that costs more than the product itself? Yes, really: the performance lift is truly worth it! Ask your local Naim specialist dealer to demonstrate this pairing in action.

Acclaim for NDX 2

Stereo Magazine said: “The NDX 2 is convincing all-rounder that finds the right tone for every style. Outstanding”, while Hi-Fi+ took an instant liking to it, saying: “a short burst of NDX 2 quickly showed where the money was spent and how easy it was to justify sonically.”

Upgrade Option: XPS DR / 555 PS DR power supply

The player can be upgraded with an external XPS DR or 555 PS DR power supply, giving you a marked increase in sonic authority and emotion.

Inside the ND 555

Naim's reference network player is quite simply the best source component it's ever developed. Drawing on decades of digital and analogue engineering experience, the ND 555 marries the innovative new streaming platform with classic Naim analogue technology.

The ND 555 features a 40-bit SHARC processor with advanced signal processing, a suspended brass sub-chassis to isolate sound-critical circuits from vibrations and the best external power supply Naim has ever made. Whether you're listening to Bonham's solid groove or Coltrane's dizzying scales, the ND 555 lets the music flow with astonishing ease and uniquely engaging musicality. Partnered with Statement or 500 series amplification, we believe the ND 555 is as close to live music as it gets.

The ND 555 is bristling with innovative technology from input to output. The streaming section uses the latest Naim network card featuring low-noise, high-speed LVDS to route the digital audio signal. The higher speed is capable of decoding most HD audio formats at up to 32 bits/384 kHz or DSD128. Rather than the source acting as the digital timing master, our new streaming board turns things around and allows our DAC clock to control the flow of audio data. The data is integer-over-sampled in a SHARC DSP to an incredible 40-bit accuracy and fed into dual Burr-Brown® PCM1704U-K DACs, true R2R ladder designs valued for their exceptional sound quality.

Naim's renowned DR technology, as used in its award-winning range of amplifiers and power supplies, makes its first appearance in a network player, providing ultra-pure DC voltage to the sensitive audio circuitry in the ND 555. The analogue stages use only high-grade through-hole components and are suspended on sprung sub-chassis with heavy brass plates to minimise the effects of microphony.

The ND 555 can be controlled – along with all the players and Uniti Core in this guide – via the Naim App for iOS and Android. You can access all of your music including radio pre-sets, streaming services and playlists. You can also update your system wirelessly with a single tap.

For those who prefer a more tactile experience, a premium metal Zigbee® remote control is supplied. It requires no line of sight to the player, so you can take control whatever direction you're facing. The front panel features a 5" colour display presenting album artwork as well as track information in crisp detail, and there are keys for most commonly used functions including standby and input selection.

HIFICRITIC
AUDIO EXCELLENCE

Isolating Digital and Analogue Circuitry

A simple shield would have isolated the ND 555's digital circuitry from its delicate analogue stage and reduced interference to a degree, but Naim's engineers wanted a more effective solution. They developed a completely separate housing within the main chassis, which acts as a Faraday cage - shielding other components from electrical noise and optimising performance.

Ultra-Clean Power for Maximum Performance

ND 555 uses a total of 13 Naim DR (Discrete Regulator) components to provide ultra-clean voltage to the individual audio stages. Designed in-house to maintain a stable DC output voltage regardless of fluctuations in the supply voltage or the current draw from the output, Naim DR regulators allow circuits to operate at their absolute best with minimal noise and interference.

Separate Power Supply

The ND 555's power supply is housed in a separate unit – the exceptional 555 PS DR - to keep electro-magnetic interference from the oversized toroidal transformer at bay. You can add a second 555 PS for a 'double-barrelled' set-up, where the ND 555's analogue and digital stages are individually powered for ultimate performance.

Upgrade Option: Super Lumina Interconnect Cable

Super Lumina interconnects are designed to minimise the effect of external and internal interference sources and preserve maximum signal fidelity.

The Ultimate Set Up

Imagine a lucky Naim user with this epic multi-room set-up: a dedicated listening room based on the ultimate source, ND 555; Uniti Nova driving music and TV sound in the living room, Uniti Atom in the home office; Mu-so wireless speaker in the kitchen and 3 Mu-so Qb wireless speakers in the bedrooms upstairs. All fed by a Uniti Core - the ideal multi-room hub, able to serve music to up to 12 players.

How to Set Up Multiroom

It's simple to set up a Naim multiroom music system – everything you need is in the Naim app. Each connected Naim product can be named to make its location clear. When Naim products are connected in party mode, the app lets you change volume across all units at once for complete control.

Multiroom

Fill your entire home with Naim sound thanks to the Multiroom and Party Mode feature supported by Naim's network players and systems. Play back the same music in perfect sync, or choose different tune for different rooms – and keep everything under control via the Naim app.

AirPlay 2

Naim Mu-so and Mu-so Qb already support AirPlay 2; that functionality is coming to the Uniti range and network players very shortly. AirPlay 2 adds alternative multi-room options, including Siri voice control of your music, but also the ability to combine mixed brands of AirPlay 2 compatible music speakers and systems into a multiroom system.

Salisbury, Wiltshire, England
naimaudio.com
