

mu-so

## ENGINEERING

Beneath its anodised aluminium skin Mu-so is alive with innovation. At its heart an active arrangement of six digital amplifiers deliver a total of 450 watts of power to six custom-designed speakers.

### 1 BASS REFLEX SYSTEM

Two large custom bass drivers are supported by a sophisticated porting system with an outlet at the end of the cabinet. It was carefully designed to move large volumes of air with low turbulence for richly textured, low distortion bass.

### 2 ACRYLIC BASE

The whole Mu-so cabinet sits on an illuminated base of high-grade acrylic which provides the foundation for the electronics and speakers to shine.

### 3 DSP

The Mu-so audio brain is a 32-bit digital signal processor with software fine-tuned by our engineers in the listening room.

It controls the flow of music information to each speaker and benefits from the developments we made in designing the best in-car audio systems for Bentley motors. Two EQ settings tailor sound for close to and away from room boundaries for superb sound quality anywhere in your home.

### 4 SILK-DOME TWEETERS

Silk dome tweeters were chosen through listening tests to replace the traditional metal cones found in many wireless speakers for their benefit to sound quality.

### 5 MID-RANGE DRIVERS

Custom mid-range drivers provide crystal clear speech and emotively powerful vocals. We found through tests that positioning them as the outermost driver aided even sound dispersion.

## MATERIALS AND DESIGN

There are many elements of design craft that make Mu-so a unique system. All are born from a desire for music performance and quality.

An extruded aluminium heat sink maximises thermal performance. The wooden speaker cabinet, designed for acoustic performance, is wrapped in a layer of high-grade aluminium to provide extra dampening for a distortion free sound. The volume control is constructed of a ring of solid aluminium which runs the circumference of the touch-panel control

interface with its patent-pending system of illumination.

The embedded antenna system is another patent-pending Mu-so innovation, providing seamless and robust Wi-Fi connectivity.

## CONTROL APP

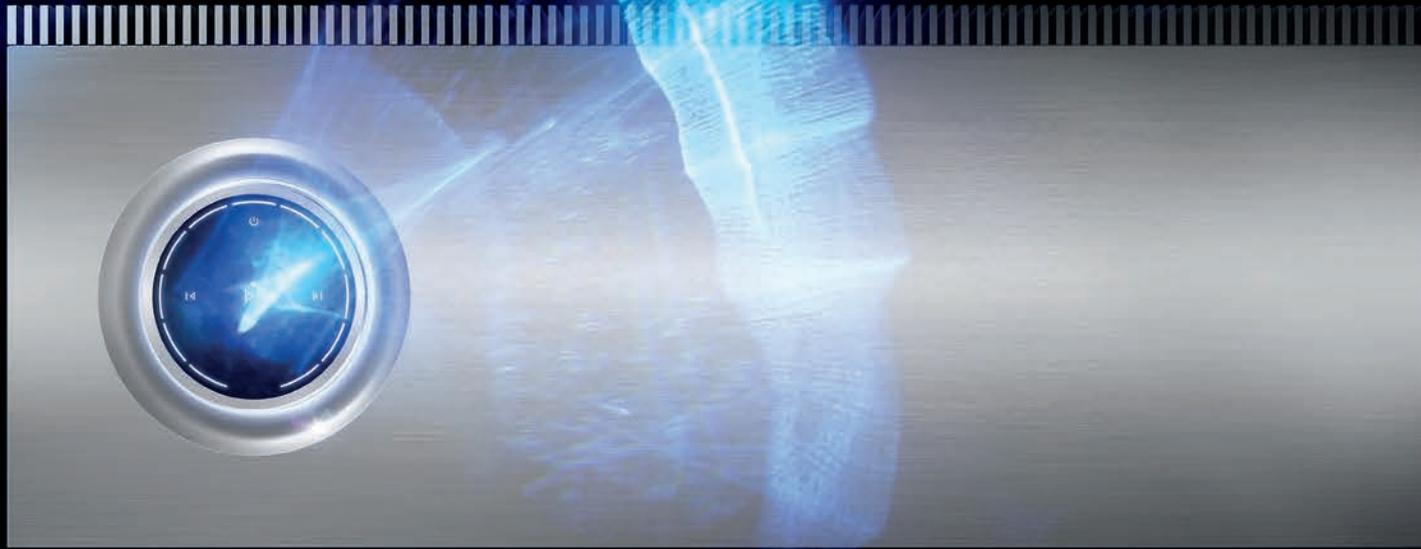

Unite all of your music in one place with the intuitive Naim control app for iOS devices and Android and put millions of songs at your fingertips. You can just scratch the surface or go deeper to explore information on artists, discographies, biographies, reviews, image galleries, similar music and more. The app even includes a simple set up wizard so you'll be online and listening to more music than ever before in no time.

## CUSTOMISATION

Mu-so is supplied with a Classic Naim Black speaker grille as standard. You can add a new dimension of colour to complement your living space and style with Deep Blue, Vibrant Red and Burnt Orange grilles. Available from [naimaudio.com/mu-so](http://naimaudio.com/mu-so) (UK) and selected retailers worldwide.

Grille colours:

Let the voice of Naim take you inside the music.

Mu-so® is our first wireless music system. Finely tuned by our specialist engineers in England, its powerful digital brain delivers the most exceptional quality in sound, commanding 450 watts of power through six custom-designed speakers, to create an experience of music that has to be heard to be believed.

## FEATURES

Unleash your digital music, wherever it's stored.

Connect Mu-so to your network via Ethernet or Wi-Fi to open up a world of music. Stream music in breath-taking high-resolution wirelessly via UPnP™ and AirPlay or browse and play millions of songs through Spotify Connect, TIDAL and Internet Radio.

High quality Bluetooth (aptX) audio connectivity, a USB input for charging and playback of smart phones, tablets and MP3 players, a 3.5mm analogue input and a digital input for TVs, set-top boxes and games consoles make Mu-so the complete music centre.

You can create a multiroom music system by using Mu-so with other Naim streaming players or simply by selecting multiple Mu-so systems using AirPlay from iTunes.

## THE NAIM AUDIO STORY

Even the simplest idea can become the seed for something truly monumental.

Naim founder, Julian Vereker MBE (1945-2000), was a successful racing car driver, self-taught engineer and entrepreneur with a deep passion for music. Spending his spare time listening to the greatest artists of the 1960's and 70's, as well as his own friends playing live, Julian found the performance of playback at home fell woefully short in almost every area that mattered.

Not content with second best, he set about designing his own amplifiers and loudspeakers, completely unaware that he was laying the foundations for a range of iconic and award-winning hi-fi products that would reach well into the next century. Julian had no ideas of fame or fortune, he simply wanted to experience music replayed in the truest and purest possible form.

These were our founding values in 1973 and they continue to fuel every aspect of our progress today. The technology we use to achieve our aims will always change and evolve with time, but our ultimate goal remains the same – to bring our listeners a deeper and more intense experience of music.
